## Type of Commute: Drove Alone

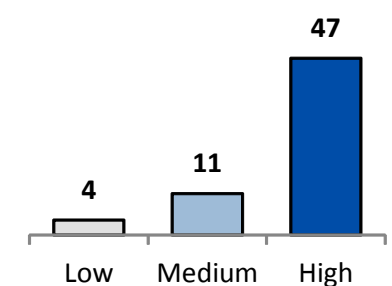

This map shows how people age 16 and over commute to work. About 83% of the population drove alone for their commute in the Metropolitan Planning Organization census tracts.

The full range of data for each map has been divided into thirds to create low, medium, and high percentage categories. A histogram is also included to show that the data is not necessarily distributed equally across these three categories. About 70% of the population that drove alone are in the 47 tracts in the highest percentage category.

The chart below shows the number of tracts in the Metropolitan Planning Organization Area that have low, medium, and high categorizations type of commute.

Map date: 9/11/13 Map data: U.S. Census Bureau, ACS 2007-11, Table B08301  
 Caution: This map is based on imprecise source data, subject to change, and for general reference only. The work that provided the basis for this map was supported by funding under an award with the U.S. Department of Housing and Urban Development.
